

## Informatics 2 – Foundations of Data Science: Criteria for marking visualisation explanations/interpretations and code

| Mark                  | Explanation/interpretation                                                                                                                                                                                                                                                                                                                                                   | Code readability                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4 - Excellent</b>  | <ul style="list-style-type: none"> <li>• Easy to comprehend due to clear structure and precision.</li> <li>• Clear and correct summarisation of multiple patterns and noteworthy features, possibly with sensible explanations or hypotheses for them or relating them to other data or knowledge.</li> <li>• Interpretation means the visualisation makes sense.</li> </ul> | <p>Code is very easy to read, due to</p> <ul style="list-style-type: none"> <li>• code being clean with appropriate comments</li> <li>• appropriate use of pandas functions (such as <code>pd.merge()</code> and <code>.groupby()</code>).</li> </ul>                                                                                                                                                                           |
| <b>3 - Good</b>       | <ul style="list-style-type: none"> <li>• Straightforward to comprehend due to reasonably clear structure and precision.</li> <li>• Clear and correct summarisation of some patterns and noteworthy features.</li> <li>• Interpretation has added significantly to the visualisation.</li> </ul>                                                                              | <p>Code is easy to read</p> <ul style="list-style-type: none"> <li>• due to code being clean</li> <li>• appropriate use of pandas functions (such as <code>pd.merge()</code> and <code>.groupby()</code>).</li> </ul>                                                                                                                                                                                                           |
| <b>2 - Fair</b>       | <ul style="list-style-type: none"> <li>• Somewhat difficult to comprehend due to structure or vagueness</li> <li>• but is still clear that a few patterns and noteworthy features have been summarised or identified correctly, though there may be minor errors.</li> <li>• Interpretation has added a bit to the visualisation.</li> </ul>                                 | <p>Code is understandable with some work due to EITHER:</p> <ul style="list-style-type: none"> <li>• Not being clean, for example with commented out or unnecessary code</li> <li>• but still using pandas functions appropriately</li> </ul> <p>OR</p> <ul style="list-style-type: none"> <li>• Being clean</li> <li>• but using multiple lines of code to achieve what could have been done with pandas functions.</li> </ul> |
| <b>1 - Inadequate</b> | <ul style="list-style-type: none"> <li>• Very difficult to comprehend, due to poor structure or vagueness,</li> <li>• but at least one pattern appears to have been summarised correctly or a noteworthy feature identified.</li> <li>• Maybe some significant errors.</li> <li>• Interpretation has not added to visualisation.</li> </ul>                                  | <p>Code is difficult to understand due to</p> <ul style="list-style-type: none"> <li>• not being clean and unclear code</li> <li>• probably not using pandas functions.</li> </ul>                                                                                                                                                                                                                                              |
| <b>0 - Absent</b>     | No meaningful interpretation.                                                                                                                                                                                                                                                                                                                                                | Code is clearly not functional.                                                                                                                                                                                                                                                                                                                                                                                                 |
